

AMENDMENTS TO THE CLAIMS

The listing of Claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

503
C 17 1. (Currently Amended) A method of operation of a client computer comprising the steps of:

- B1
- (a) displaying, at the client computer, a multilink as a hyperlink, the multilink providing a logical point of access to a plurality of files, each of the plurality of files having a respective unique electronic address associated with the multilink in a file interpretable to display the multilink;
 - (b) generating a menu of options, at the client computer, in response to a user's selection of the multilink; and
 - (c) transmitting, from the client computer, a request for a user-selected file associated with a user-selected option.

2. (Currently Amended) The method of claim 1, wherein each option of the menu of options is associated with at least one of the plurality of files.

503
C 17 3. (Previously Amended) The method of claim 2, further comprising the step of:

- (d) selecting, at the client computer, the user-selected option from

the menu of options, the user-selected option being associated with the user-selected file, step (d) being performed intermediate steps (b) and (c).

4. (Previously Amended) The method of claim 3, wherein the request transmitted in step (c) identifies the unique electronic address of the user-selected file.

B^c
5. (Currently Amended) The method of claim 1, wherein the electronic addresses of the plurality of files are concatenated in a multilink URL is associated with ~~a multilink URL comprising a plurality of electronic addresses~~ the multilink.

6. (Currently Amended) The method of claim 5, wherein the menu of options is generated by parsing the ~~plurality of electronic addresses~~ multilink URL to identify each electronic address and presenting an option in the menu of options for each of the electronic addresses.

7. (Currently Amended) The method of claim 6, wherein the menu of options is generated in step (b) by a computer program for parsing the multilink URL to identify the ~~plurality of electronic addresses~~ and generating the menu of options.

8. (Currently Amended) The method of claim 7, wherein the menu of options comprises a pop-up menu that no more than partially obscures a web page containing the multilink.

9. (Currently Amended) The method of claim 8, wherein the plurality of electronic addresses further comprises include an electronic address of a default file containing the computer program.

10. (Previously Amended) The method of claim 9, further comprising the step of:

(e) receiving, at the client computer, the computer program, step (e) being performed before step (b).

11. (Currently Amended) The method of claim 10, wherein a proxy computer for relaying a communication between a client computer and a server computer interconnects the client computer to the server computer and wherein the proxy computer appends the computer program to every file transmitted from the proxy computer, the method further comprising the step of:

(f) transmitting, from the proxy computer to the client computer, a the file containing a the multilink URL, the file having the computer program appended thereto, step (f) being performed before step (e).

12. (Currently Amended) The method of claim 10, wherein a proxy computer for relaying a communication between a client computer and a server computer interconnects the client computer to the server computer and wherein the proxy computer appends the computer program to every file containing a multilink URL which is transmitted from the proxy computer, the method further comprising the step of:

- b1
- (f) transmitting, from the proxy computer to the client computer, ~~a~~ the file containing ~~a~~ the multilink URL, the file having the computer program appended thereto, step (f) being performed before step (e).

13. (Currently Amended) The method of claim 10, wherein a proxy computer for relaying a communication between a client computer and a server computer interconnects the client computer to the server computer and wherein the proxy computer embeds a reference to the computer program in every file transmitted from the proxy computer, the method further comprising the steps of:

- (f) transmitting, from the proxy computer to the client computer, ~~a~~ the file containing ~~a~~ the multilink URL, the file having the reference to the computer program embedded therein, step (f) being performed before step (e); and
- (g) transmitting, from the client computer, a request for transmission of the computer program to the client computer, step (g) being performed intermediate steps (f) and (e).

14. (Currently Amended) The method of claim 10, wherein a proxy computer for relaying a communication between a client computer and a server computer interconnects the client computer to the server computer and wherein the proxy computer embeds a reference to the computer program in every file containing a multilink URL which is transmitted from the proxy computer, the method further comprising the steps of:

- (f) transmitting, from the proxy computer to the client computer, a the file containing a the multilink URL, the file having the reference to the computer program embedded therein, step (f) being performed before step (e); and
- (g) transmitting, from the client computer, a request for transmission of the computer program to the client computer, step (g) being performed intermediate steps (f) and (e).

15. (Original) The method of claim 1, wherein the menu of options comprises hyperlinks associated with URLs.

16. (Original) The method of claim 15, wherein at least one of the hyperlinks is a multilink.

17. (Currently Amended) A servicing computer for servicing a request for a file initiated by a client computer connected to the servicing computer by a communications network, the servicing computer comprising:

a memory;

a processor;

a first computer program stored in the memory for displaying, at the client computer, a multilink as a hyperlink, the multilink providing a logical point of access to a plurality of files, each of the plurality of files having a respective unique electronic address associated with the multilink in a file interpretable to display the multilink;

a second computer program stored in the memory for generating a menu of user-selectable options responsive to a user's selection of a multilink to a plurality of files; and

a third computer program stored in the memory for appending the first computer program to a file transmitted by the servicing computer.

18. (Original) The servicing computer of claim 17, wherein the servicing computer is a server computer.

19. (Original) The servicing computer of claim 17, wherein the servicing computer is a proxy computer for relaying a communication between a client computer and a server computer.

20. (Previously Amended) The servicing computer of claim 19, wherein the third computer program is configured to append the second computer program only to files transmitted by the servicing computer which contain a multilink URL.

21. (Currently Amended) A servicing computer for servicing a request for a file initiated by a client computer connected to the servicing computer by a communications network, the servicing computer comprising:

a memory;

a processor;

a first computer program stored in the memory for displaying, at the client computer, a multilink as a hyperlink, the multilink providing a logical point of access to a plurality of files, each of the plurality of files having a respective unique electronic address associated with the multilink in a file interpretable to display the multilink;

a second computer program stored in the memory for generating a menu of user-selectable options responsive to a user's selection of a multilink to a plurality of files; and

a third computer program stored in the memory for embedding a reference to the second computer program to a file transmitted by the servicing computer.

22. (Original) The servicing computer of claim 21, wherein the servicing computer is a server computer.

23. (Original) The servicing computer of claim 21, wherein the servicing computer is a proxy computer for relaying a communication between a client computer and a server computer.

24. (Previously Amended) The servicing computer of claim 23, wherein the third computer program is configured to embed a reference only in files transmitted by the servicing computer which contain a multilink URL.

25. (Canceled)

26. (Canceled)

27. (Canceled)

50h
C17 28. (Currently Amended) A method of operation of a servicing computer for servicing a request from a client computer for a file stored on the servicing computer, the method comprising the steps of:

- (a) appending, to the file requested by the client computer, a computer program for parsing a multilink URL comprising a plurality of electronic addresses to generate a menu of user-selectable options responsive to a user's selection of a multilink associated with the multilink URL of the file, each of the options corresponding to a respective one of the plurality of electronic addresses; and
- (b) transmitting the file to the client computer responsive to a request therefor.

29. (Currently Amended) ~~A~~ The method of claim 28, wherein the computer program for generating a menu is appended in step (a) only if the file contains a multilink URL.

30. (Currently Amended) A method of operation of a servicing computer for servicing a request from a client computer for a file stored on the servicing computer, the method comprising the steps of:

- (a) embedding, in the file requested by the client computer, a reference to a computer program for parsing a multilink URL comprising a plurality of electronic addresses to generate a menu of user-selectable options responsive to a user's selection of a multilink associated with the multilink URL of the file; and
- (b) transmitting the file to the client computer responsive to a request therefor.

31. (Original) The method of claim 30, wherein the computer program for generating a menu is embedded in step (a) only if the file contains a multilink URL.

32. (Original) The method of claim 30, wherein the servicing computer stores the computer program for generating a menu.

33. (Currently Amended) A method of operation of a computer comprising the steps of:

- (a) displaying a multilink as a hyperlink of a web page, the multilink providing a single logical point of access to a plurality of files, each of the plurality of files having a respective unique electronic address

associated with the multilink in a file interpretable to display the web page;

- (b) displaying a menu of options superimposed over the web page to no more than partially obscure the web page, in response to a user's selection of the multilink; and
- (c) transmitting a request for a user-selected file associated with a user-selected option.

34. (Previously Added) The method of claim 33, wherein the multilink is associated with a multilink URL comprising a plurality of electronic addresses.

35. (Currently Amended) The method of claim ~~33~~ 34, wherein the menu of options is a pop-up menu generated by parsing the ~~plurality of electronic addresses~~ multilink URL to identify each electronic address, and wherein an option is presented in the menu of options as a respective hyperlink for each electronic address.
